Re: Fields Brook

Dear Mr. Constantelos:

SCM Corporation hereby requests an extension of time within which to respond to EPA's May 16, 1986 request for information.

SCM submitted its initial response to EPA on June 20, 1986. In that response, SCM answered most of EPA's questions and submitted 639 pages of documents. On June 25, SCM supplemented that response by submitting almost 900 pages of additional documents. Since that time, SCM has continued to work on finalizing its response but has not been able to complete those efforts by July 18, which is the date of the initial requested extension.

On July 3 EPA issued its draft Feasibility Study for the sediment removal of Fields Brook. The comment period on that Feasibility Study is presently scheduled to close on August 5.

Since essentially the same personnel who are preparing the response to the request for information are also responsible for reviewing and commenting on the Feasibility Study, it has not been possible for SCM to do both within a short period of time. Therefore, SCM is requesting a further extension of time until August 15 within which to finalize its response to EPA's request for information.

We have been advised that EPA has recently sent its initial request for information to other companies relative to Fields Brook. Therefore, we believe that granting this additional extension will not delay EPA's work, particularly in light of the volume of material which has previously been submitted by SCM and other companies.
